

Customized Metal Products Introduction

Shenzhen Longzhiyu Crafts Co.,Ltd

15 Years Metal Crafts Manufacturing Enterprise 

Company Profile

Shenzhen Longzhiyu Crafts Co.,Ltd is a comprehensive manufacturing enterprise which specializes in badges, keychains, medals, bookmarks and other metal crafts custom, integrating design, development, production, sales and service as one whole. Our company was established in 2006, always keeping the principle of "Excellent Quality, Star Service". With our unique ideas, advanced equipment, good quality and trendy looks, we have gained the trust of numerous customers at home and abroad. Our products are sold well at home and abroad, covering over 150 countries and areas around the world, especially popular among customers in Europe, USA, Southeast Asia and the Middle East. Since its establishment, we always abide by the management idea of "Put credibility and quality at the top priority, constantly strive for excellence and always keep up." We have built up stable cooperation relationship with numerous well-known enterprises such as McDonald's, Porsche, BMW, GM, 7-11, and the Asian games, etc., and we have won a wide recognition from our partners.

15 Years Production Experience, 10000m2 Standard Workshop, Over 100 Sets of Advanced Equipment, Sophisticated Technology

Engraving Mould Workshop

With more than 20 sets of CNC engraving machine, adopted advanced full-mechanized carved mold, selected high quality steel mold, for complex design products also can be more accurate depiction of lines and details.to molding.

Die-casting Department

All kinds of complex 3D relief effects can be made by die-casting. Working principle: After the die-casting mould is carved, integrating the moulds with shiny surface, putting into the hot melted metal and then cooling to molding.

Stamping Department

Featured by a simple sense of concave-convex. Working principle: After the stamping mould is carved, stamping on the metal sheet from the top down with extreme pressure and then the metal can be shaped.

Electroplating Workshop

Electroplating is a kind of chemical process, and the basic process is to soak the product in metallic salt solution as the cathode and metal plate as the anode. After connecting the direct current, depositing the desired coating on the product, like gold plating, silver plating, copper plating, nickel plating, etc.

Baking Varnish Coloring Workshop

The die-cast or stamped embryo has a concave-convex feel. The machine or manually injects the adjusted baking varnish into the metal groove through a syringe, and then sends it into the baking box for baking.

Printing Coloring Workshop

Working Principle: To print the content on metal directly , or print on paper and stick to a metal surface. Also can add an epoxy coating on surface to protect the printing surface with waterproof effect.

Assembly and Packing Workshop

Manual assembly and packing pay more attention to details, division assembly line, accurately complete each order, make sure the quality and quantity.

Warehouse Display

Showroom Display

Powerful merchants, dare to show, more than 200,000 kinds of OEM customized products

Focusing on custom-made metal crafts for 15 years, such as metal badges, keychains, bookmarks, medals, etc., with an annual output of up to 60 million pieces. Our factory now basically has all the badge mould specifications on the market, and welcome new and old customers to process and customize with drawings and samples, and inspect the factory at any time!

Three to One Service Team

When we enter into collaboration, we will form a team of experienced salespersons, designers, and business managers to provide service for you as soon as possible. We will recommend suitable customization solutions according to your needs, follow up the delivery time and production progress, strictly control the product quality, so that you can customize worry-free.

Custom-made Medals

Customized Metal Badges

Process Introduction

01

Customized Badges Introduction

Support free design according to drawings or samples, selected zinc alloy material, regular size 25-30mm

Common technology: Soft enamel, hard enamel, full metal, epoxy printing, can customized desired effect according to customer requirements.

Regular Size Cases Presentation

Badges Technology Introduction

Full metal electroplating technology

Usually used for complex high difficulty relief hollow products, the surface is electroplated layer metal color.

Common electroplating color: nickel color, black nickel color, imitation gold color, matte gold color.

Soft Enamel Coloring

The surface has sense of concave-convex, the convex for electroplating color, the concave stoving varnish can be filled with any color. Color is bright and beautiful, suitable for middle and high-end keychains customization.

Hard Enamel Coloring

The imitation enamel process fills the metal with color, the surface has a similar ceramic texture after repeated polishing. It is the preferred process for high-end keychains, and the appearance is delicate and smooth.

Printing(Epoxoy) Coloring

To print the content on metal directly , or print on paper and stick to a metal surface. Also can add an epoxy coating on surface to protect the printing surface with waterproof effect.
